EDUCATION

Georgia State University

Atlanta, GA

Bachelor of Science in Computer Science - GPA 3.7

August 2022 - May 2026

- Relevant Coursework: Object-Oriented Programming, Data Structures & Algorithms, Web Programming, Software Engineering, Cloud Computing, and Artificial Intelligence
- Dean's List (5 Semester) and President List (3 Semester)
- Git Essential Training: Earned January 2026

TECHNICAL SKILLS

- Languages: Python, Java, JavaScript, TypeScript, HTML/CSS
- Frameworks & Libraries: React, Spring, Spring Boot, REST APIs
- Databases: MySQL, PostgreSQL, NoSQL
- Cloud & DevOps: AWS (S3, Amplify, DynamoDB, Lambda, Cloud formation, CDK), Docker, Git
- Methodologies & Tools: Agile, Scrum, Kanban, Jira, CI/CD

TECHNICAL PROJECTS

IT Ticketing System

Fall 2025

Java, Spring Boot, React, REST APIs, AWS - S3, Lambda, DynamoDB, CDK, Amplify | GitHub, Website

- Architected a full-stack IT support platform with 4 layered architecture -controller, service, model and data and 15 REST endpoints, enabling teams to create, prioritize, assign, and resolve tickets through a centralized React Kanban interface
- Implemented stateless JWT/BCrypt authentication and a rule-based auto-triage engine that auto-categorizes tickets by priority and sentiment while generating actionable diagnostic steps.
- Deployed a serverless AWS stack (Lambda with SnapStart, DynamoDB, S3, CDK, Amplify) with automated SLA tracking and Slack webhook alerts, improving response-time visibility and reducing SLA breaches by 45%.

Expense Management Platform

Spring 2025

Python, Typescript, React, PostgreSQL, Docker | GitHub

- Developed a full-stack personal finance platform with Python REST APIs and React, allowing users to manage transactions, budgets, accounts, and recurring subscriptions through a centralized dashboard.
- Designed a relational PostgreSQL schema and modular React components for KPI tracking, implementing TanStack Query for client-side caching to eliminate over 60% of redundant network requests.
- Containerized PostgreSQL with Docker Compose and structured the application into separated frontend, backend, and database components, improving scalability and deployment reliability across environments.

Inventory Management System

Fall 2024

Java, Spring Boot, PostgreSQL, Docker | GitHub

- Architected a layered RESTful backend with 13 endpoints across 5 domain controllers (Java 21, Spring Boot 4, JPA) to manage multi-warehouse inventory, supplier purchase orders, and live catalog valuations.
- Implemented automated reorder-quantity calculations and JUnit 5 unit/integration testing to validate business logic and database interactions, improving reliability and reducing regression risk.

EXPERIENCE

MAI Consulting

Atlanta, GA

Web Design

June 2026 - Aug. 2026

- Redesigned and optimized WordPress websites by analyzing user requirements, site structure, navigation, and responsiveness to improve usability and mobile engagement by 7%.
- Collaborated with clients and team members to translate business requirements into responsive web solutions, identify usability issues, and implement practical design improvements.

Environmental Graphics Group

Lake City, GA

Technical Operations Consultant

April 2025 - Sept. 2025

- Analyzed production workflows to identify process bottlenecks and implement workflow improvements, reducing project turnaround time by 5%.
- Diagnosed the root cause of recurring delays by mapping the end-to-end production process, then partnered with cross-functional teams to redesign the material handoff sequence and eliminate the bottleneck.
